Sayeed Ahmad

Product Designer — Design Systems & Generative Product Tooling

SUMMARY

Product designer with 9+ years designing design systems, SaaS dashboards, and the systems generative products build from, remotely with US teams since 2016. At Elegant Themes I led the Figma component template behind Divi AI's section library and shipped 200+ layout packs for Divi, a builder with nearly a million customers.

EXPERIENCE

Elegant Themes — Product Designer (Remote)

California, USA · Aug 2017 – Sep 2026

Divi is a WordPress theme and visual website builder used by nearly a million web designers and business owners.

- Led the Figma component template behind Divi AI's section library — built and corrected the components, matched them to what Divi could actually build, and structured the template so the team could extend it to new section topics without breaking existing work. Those templates were then built back into Divi, so a generated layout resolves to the real design system rather than arbitrary styling.
- Tested Divi AI with real requests to find where its output broke down — diagnosing whether a failure came from the model, the template, or the design system underneath — then either corrected the system on my side or fed the pattern back to product and engineering.
- Rebuilt every existing Divi module, and each new one as it shipped — accordion, contact form, email opt-in, text, blurb, WooCommerce and more — as a Figma source of truth that matches what the builder can produce, and consolidated custom icons scattered across thousands of layout packs into a single Design Asset Library.
- Authored and documented the Divi Build Guidelines, which became part of Elegant Themes' internal design system.
- Designed 200+ pre-made layout packs and landing pages for Divi customers. elegantthemes.com/layouts/
- Ran color-contrast checks on layouts with accessibility tools, and held every pack to a minimum type size that mobile never dropped below.
- Onboarded designers onto Divi's module system and conventions, and contributed to design reviews.

UX Cabin — UI/UX Designer (Contract, Remote)

Cleveland, USA · Apr 2022 – Jun 2024

Design agency working across B2B and B2C product design.

- Designed Rise end to end, a platform for paying contractors in fiat or crypto across countries and compliance regimes — about 70 screens in light and dark, from onboarding, the team dashboard and the Rise ID component to funding, withdrawal and timesheets. uxcabin.com/portfolio/rise-payments-compliance-platform
- Built Rise's light/dark design system on atomic-design principles, with every token named 1:1 after the Tailwind class it becomes, so engineering could extend the interface without design support.
- Contributed to the Moen app redesign, consolidating three separate apps — Moen's own plus two from acquired companies — into one experience for managing smart water products. uxcabin.com/portfolio/moen-mobile-app
- Worked on Moen's design system: 400+ reusable components documented for team use, alongside usability testing and developer handoff for iOS and Android.

Benchmark Agency — UI/UX Designer (Remote)

Santa Monica, California, USA · Nov 2016 – Jul 2017

- Designed and launched 15+ responsive client websites across healthcare, finance, and lifestyle, and prototyped mobile apps for Northwell Health, Safe-Halo, and Lipedima.

SKILLS

Design	Design Systems · Design Systems for AI Generation · Product Design · SaaS Dashboards · Prototyping · Usability Testing · Accessibility
Tools	Figma · FigJam · Webflow · Framer · Divi/WordPress · Miro · Notion · Jira · HTML/CSS · SASS
Working	Cross-functional collaboration · Design documentation · Developer handoff · Design mentorship · Remote (US teams, 9 yrs)
Languages	Bengali (native) · English (full professional)
